RAEL MOTORI  
ELETTRICI

**RAEL**, founded in Genoa in 1969 as an electric motors repair and rewinding company, has grown to become an established name in projection and manufacture of electric motors for potentially explosive atmospheres.

Since 1986 the company has grown considerably and moved to Predosa (AL) where both production and offices are actually located.

Through constant research of products which can offer a high quality standard and market competitiveness we are geared up with automated production system like CNC turning and last generation machining centers, industrial robots, CNC grinding machine, inspection room with CMM machines, Computer controlled system for inline electrical test and Dynamometric braking test bench, automated assembly lines. We offer a great flexibility in fulfilling special customer requirements.

All of the above helped to place Rael among the leading producers of Explosion proof motors.

# 1. INTRODUCTION

## 1.0 SI Units

### Base units

Base quantity	Base quantity symbol	SI Name	SI Symbol
length	$l$	meter	m
mass	$m$	kilogram	kg
time	$t$	second	s
electric current	$I, i$	ampere	A
thermodynamic temperature	$T$	Kelvin	K
amount of substance	$n$	mole	mol
luminous intensity	$I_V$	candela	cd

### Derived units

Derived quantity	Derived quantity symbol	SI Name	SI symbol	Expression in terms of other SI units	Expression in terms of SI base units
frequency	hertz	Hz	-	-	$s^{-1}$
force	F	Newton	N	-	$kg \cdot m \cdot s^{-2}$
pressure, stress	p	Pascal	Pa	$N \cdot m^{-2}$	$kg \cdot m^{-1} \cdot s^{-2}$
energy, work, quantity of heat	E	joule	J	$N \cdot m$	$kg \cdot m^2 \cdot s^{-2}$
power	P, W	watt	W	$J \cdot s^{-1}$	$kg \cdot m^2 \cdot s^{-3}$
electric charge	q	coulomb	C		$A \cdot s$
electric potential difference, electromotive force	v	volt	V	$J \cdot A^{-1}$	$m^2 \cdot kg \cdot s^{-3} \cdot A^{-1}$
electric resistance	R	ohm	$\Omega$	$V \cdot A^{-1}$	$m^2 \cdot kg \cdot s^{-3} \cdot A^2$
electric conductance	G	siemens	S	$A \cdot V^{-1}$	$s^3 \cdot A^2 \cdot m^{-2} \cdot kg^{-1}$
capacitance	C	farad	F	$C \cdot V^{-1}$	$s^4 \cdot A^2 \cdot m^{-2} \cdot kg^{-1}$
magnetic flux density	B	tesla	T	$V \cdot s \cdot m^{-2}$	$kg \cdot s^{-2} \cdot A^{-1}$
magnetic flux	$\Phi(B)$	Weber	Wb	$V \cdot s$	$m^2 \cdot kg \cdot s^{-2} \cdot A^{-1}$
inductance	L	Henry	H	$V \cdot s \cdot A^{-1}$	$m^2 \cdot kg \cdot s^{-2} \cdot A^2$
Celsius temperature	T	degree Celsius	$^{\circ}C$	K	
plane angle	$\varphi, \theta$	radian	rad	1	$m \cdot m^{-1}$
luminance		lux	lx	$cd \cdot sr \cdot m^{-2}$	

### Other derived quantities

area	A				$m^2$
volume	V				$m^3$
speed, velocity	v				$m \cdot s^{-1}$
angular velocity	$\omega$				$s^{-1}$
acceleration	a				$m \cdot s^{-2}$
Torque, moment of force	M			N · m	$m^2 \cdot kg \cdot s^{-2}$
moment of inertia	J				$Kg \cdot m^2$
mass density	$\rho$				$kg \cdot m^{-3}$
specific volume					$m^3 \cdot kg^{-1}$
dynamic viscosity	$\rho$			$N \cdot s \cdot m^{-2}$	$m^{-1} \cdot kg \cdot s^{-1}$
				Pa · s	

## 1.1 Standards of reference

RAEL motors are constructed in compliance with the following standard.

Title	EU CENELEC	International IEC
Rotating electrical machines Part 1: Rating and performance	EN 60034-1	IEC 60034-1
Part 2-1: Standard methods for determining losses and efficiency from tests (excluding machines for traction vehicles)	EN 60034-2	IEC 60034-2
Part 5: Degrees of protection provided by the integral design of rotating electrical machines (IP code). Classification	EN 60034-5	IEC 60034-5
Part 6: Methods of cooling (IC Code)	EN 60034 -6	IEC 60034 -6
Part 7: Classification of types of construction, mounting arrangements and terminal box position (IM Code)	EN 60034-7	IEC 60034-7
Part 9: Noise limits	EN 60034-9	IEC 60034-9
Part 12: Starting performance of single-speed three-phase cage induction motors	EN 60034-12	IEC 60034-12
Part 14: Mechanical vibration of certain machines with shaft heights 56 mm and higher - Measurement, evaluation and limits of vibration severity	EN 60034-14	IEC 60034-14
General purpose three-phase induction motors having standard dimensions and outputs. Frame numbers 56 to 315 and flange numbers 65 to 740	EN 50347	IEC 60072-1
Degrees of protection provided by enclosures (IP Code)	EN 60259	IEC 60529
Electrical apparatus for explosive gas atmospheres Part 0: General requirements	EN 60079-0	IEC 60079-0
Electrical apparatus for explosive gas atmospheres Part 1: Flameproof enclosures 'd'	EN 60079-1	IEC 60079-1
Electrical apparatus for explosive gas atmospheres Part 7: Increased safety "e"	EN 60079-7	IEC 60079-7
Electrical apparatus for use in the presence of combustible dust Part 1: Protection by enclosures "t"	EN 60079-31	IEC 60079-31

## 1.2 Tolerances

### Mechanical tolerances following EN 50347 and IEC 60072-1:

Symbol	Description	Tolerance
A	Distance between centre-lines of fixing holes (end view)	± 1 mm
AB	Overall dimensions across the feet (end view)	+ 2 %
AC	Diameter of the motor (without terminal box)	+ 2 %
B	Distance between centre-lines of fixing holes (side view)	± 1 mm
C - CA	Distance from the shaft end shoulder to the centre-line of nearest mounting holes in the feet	± 3 mm
D - DA	Diameter of the shaft extension.	$\emptyset 11 - 28$ j6 $\emptyset 32 - 48$ k6 $\emptyset \geq 55$ m6
E - EA	Length of the shaft extension from the shoulder	$\emptyset < 55$ mm - 0,3 mm $\emptyset > 60$ mm + 0,5 mm
F - FA	Width of the keyway of the shaft extension	h9
GA - GC	Distance from the top of the key to the opposite surface of the shaft extension	+ 0,2 mm
H	Distance between the centre-line of the shaft to the bottom of the feet	$H \leq 250$ - 0,5 mm $H \geq 280$ - 1 mm
HD	Distance from the top of the terminal box and to the bottom of the feet	+ 2 %
K	Diameter of the holes or width of the slots in the feet of the motor	+ 3 %
L	Overall length of the motor with a single shaft extension	+ 1 %
M	Pitch circle diameter of the fixing holes	± 0,8 mm
N	Diameter of the spigot	$\emptyset < 230$ j6 $\emptyset \geq 250$ h6
P	Outside diameter of the flange	± 1 mm
R	Distance from the shaft shoulder to the mounting surface of the flange	± 3 mm
S	Diameter of the fixing holes in the mounting flange or nominal diameter of thread	+ 3 %
	Distance from the shaft shoulder to the mounting surface of the flange with locked bearing	± 0,5 mm
	Mass of the motor	- 5 a + 10 %

### Tolerances electrical parameter following EN 60034-1 and IEC 60034-1:

Quantity	Tolerance
Efficiency ( $\eta$ )	- 0,15 (1- $\eta$ ) for $P_N \leq 50$ kW
Total losses	+10%
Power factor ( $\cos \phi$ )	$\frac{1-\cos\phi}{6}$ minimum absolute value 0,02 maximum absolute value 0,07
Slip (rpm) (at full load and working temperature)	$\pm 30\%$ per $P_N < 1$ kW $\pm 20\%$ per $P_N \geq 1$ kW
Locked rotor current ( $I_A$ )	+ 20%
Locked rotor torque ( $T_A$ )	-15% a +25%
Breakdown torque ( $T_{max}$ )	-10% ( for this tolerance the value $T_{max} / T_n$ should be at least 1,6)
Moment de Inertia ( $J$ )	±10%
Sound intensity level (sound pressure)	+3 dB (A)

## 1.3 Hazardous places

### 1.3.1 General information

DIRECTIVE 1999/92/EC on minimum requirements for improving the safety and health protection of workers potentially at risk from explosive atmospheres.

'Explosive atmosphere' means a mixture with air, under atmospheric conditions, of flammable substances in the form of gases, vapours, mists or dusts in which, after ignition has occurred, combustion spreads to the entire unburned mixture.

The directive gives information regarding '**Classification of places where explosive atmosphere may occur**'.

*The classification of hazardous places in zones competes to the customer whose working centres and activities contain or give place to such dangers.*

*The safety against explosion can be only reached with the contribution, and the mutual informative exchange, both the manufacturer and the final users.*

### INDICATIONS REGARDING THECLASSIFICATION OF PLACES WHERE EXPLOSIVE ATMOSPHERES MAY OCCUR

For the classification of the areas reference to the relative harmonized technical norms regarding the specific fields:

- EN 60079-10 (IEC 60079-10) Electrical apparatus for explosive gas atmospheres.  
Part 10: Classification of hazardous areas.
- EN 61241-10 (IEC61241-10) Electrical apparatus for use in the presence of combustible dust  
Part 10: Classification of areas where combustible dusts are or may be present.

#### Zone 0

A place in which an explosive atmosphere consisting of a mixture with air of flammable substances in the form of gas, vapour or mist is present continuously or for long periods or frequently.

*Note: In general, said conditions, when they present, they interest the inside of tanks, tubes and containers, etc.*

#### Zone 1

A place in which an explosive atmosphere consisting of a mixture with air or flammable substances in the form of gas, vapour or mist is likely to occur in normal operation occasionally.

*Note: such zone can also comprise:*

- places in the immediate vicinities of zone 0;
- places in the immediate vicinities of the feeding openings;
- places in the immediate vicinities of the filling openings and emptying;
- places in the immediate vicinities of apparatuses, systems of protection and fragile components of glass, ceramics and analogous materials;
- places in the immediate vicinities of glands not sufficiently sealing, as an example on pumps and valves with glands.

#### Zone 2

A place in which an explosive atmosphere consisting of a mixture with air of flammable substances in the form of gas, vapour or mist is not likely to occur in normal operation but, if it does occur, will persist for a short period only.

*Note: such zone can also comprise, surrounding places zones 0 or 1.*

#### Zone 20

A place in which an explosive atmosphere in the form of a cloud of combustible dust in air is present continuously, or for long periods or frequently.

*Note: In general, said conditions, when they present, they interest the inside of tanks, tubes and containers, etc.*

#### Zone 21

A place in which an explosive atmosphere in the form of a cloud of combustible dust in air is likely to occur in normal operation occasionally.

*Note: such zone can also comprise, for example, places in the immediate vicinities of loading points and powder emptying and places in which powder layers are formed or that, during the normal operation, could produce one explosive combustible powder concentration in mixture with the air.*

#### Zone 22

A place in which an explosive atmosphere in the form of a cloud of combustible dust in air is not likely to occur in normal operation but, if it does occur, will persist for a short period only.

*Note: such zone can also comprise, places in proximity of apparatuses, systems of protection and components containing powders, from which the powders can leak out because of losses and to form layers of powders (for example salt from milling, in which the powder leak from the mills and it is deposited).*

#### Notes:

1. Layers, deposits and heaps of combustible dust must be considered as any other source which can form an explosive atmosphere.
2. 'Normal operation' means the situation when installations are used within their design parameters.

### 1.3.2 Classification of the equipment for areas where explosive atmosphere may occur

#### GROUPS AND CATEGORIES OF APPARATUSES

Within the directive 94/9/CE, the apparatuses, comprised if necessary the devices and the components are divided in two groups.

**Group I** comprises equipment intended for use in the underground parts of mines, and to those parts of surface installations of such mines, likely to become endangered by firedamp and/or combustible dust.

It is sub-divided into 2 Categories, as shown below:

**Category M1:** very high level of protection

**Category M2:** high level of protection

**Group II** comprises equipment intended for use in other places likely to become endangered by explosive atmospheres.

It is sub-divided into 3 Categories, as shown below

**Category 1:** very high level of protection

**Category 2:** high level of protection

**Category 3:** normal level of protection

For the type of protection "d", "i", "nC" and "nL", the electrical apparatus of Group II are subdivided in IIA, IIB and IIC, like prescribed in the relative specific European Norms regarding these types of protection.

How much higher is the possibility that an explosive atmosphere can take place, much higher must be the level of the adopted safety measures.

#### CRITERIA FOR THE CHOICE OF THE APPARATUSES AND THE SYSTEMS OF PROTECTION

In case the document on the protection against explosion based on the risk assessment does not preview otherwise, in all the areas in which explosive atmospheres can be formed are used apparatuses and systems of protection correspondents to the categories as per directive 94/9/CEE.

In particular, in such areas the following categories of apparatuses are used, provided that adapted, to second of the cases, to gas, vapours or fogs and/or powders:

- in zone 0 or zone 20, apparatuses of category 1;
- in zone 1 or zone 21, apparatuses of category 2;
- in zone 2 or zone 22, apparatuses of category 3;

Below you can find an outline for the choice of means of protection in function of the use zone.

GROUP	CATEGORY	Means of protection			Explosive atmosphere presence	Zone
		Level	Characteristic of protection (All. I)	Characteristic of protection (All. II)		
II	1	Very high	In case of breakdown of means of protection, the level of safety is guaranteed from at least a second independent mean of protection. Moreover, the level of safety is guaranteed even if two independent anomalies are manifested	They must be planned and manufactured so that the sources of ignition are not activated, not even in case of exceptional anomalies of the apparatus	continuously or for long periods	0 1 2 20 21 22
	2	High	The level of safety is guaranteed also in presence of recurrent anomalies or defects of operation of the apparatuses of which it is habitually necessary to hold account.	They must be planned and manufactured so as to avoid sources of ignition, also in case of recurrent anomalies or defects of operation of the apparatuses of which it is habitually necessary to hold account.		1 2 21 22
	3	Normal	The level of safety is guaranteed in the normal operation.	They must be planned and manufactured so as to avoid sources of ignition expectable during the normal operation.		2 22

## 1.4 Temperature Classes

### 1.4.1 Explosive atmosphere consisting of a mixture with air of flammable substances in the form of gas, vapour or mist (GAS)

#### Ignition temperature of an explosive gas atmosphere

Lowest temperature of a heated surface which, under specified conditions according to IEC 60079-4, will ignite a flammable substance in the form of a gas or vapour mixture with air.

#### Maximum surface temperature

Highest temperature which is attained in service under the most adverse conditions (but within the specified tolerances) by any part or surface of an electrical apparatus, which would be able to produce an ignition of the surrounding explosive atmosphere.

Group II electrical apparatus, in function of their maximum surface temperature shall be marked either classified in a temperature class given in Table below:

**Classification of maximum surface temperatures  
for Group II electrical apparatus**

Temperature class	Maximum surface temperature (°C)
T1	450
T2	300
T3	200
T4	135
T5	100
T6	85

The maximum surface temperature shall not exceed the lowest ignition temperature of the explosive atmospheres concerned.

As far as the electric motors the maximum surface temperature will be referred to the temperature of:

the **external surface** of the enclosure as far as the *Flameproof enclosures 'd'* (EN 60079-1, IEC 60079-1) and *Equipment protection by pressurized enclosures 'p'* (EN 60079-2, IEC 60079-2)

**all the surfaces both external and internal** as far as the *Increased safety "e"* (EN 60079-7, IEC 60079-7) and the *Construction, test and marking of type of protection 'n' electrical apparatus* (EN 60079-15, IEC 60079-15).

Below there is a representing table of the main inflammable gaseous substances subdivided for group of gas with relative temperatures of ignition and classes of temperature.

**Main inflammable substances subdivided for group of gas (IIA, IIB, IIC) and temperature of ignition.**

Inflammable substance	Group of GAS	temperature of ignition	Class of Temperature (°C)	Inflammable substance	Group of GAS	temperature of ignition	Class of Temperature (°C)
2-Methylpentane	IIA	300	T2	Ethyl formate	IIA	440	T2
Amyl acetate	IIA	360	T2	Methyl formate	IIA	450	T1
Butyl-n acetate	IIA	425	T2	Natural gas	IIA	482	T1

Ethylamine	IIA	385	T2	Acetylene	IIC	305	T2
Ethylmercaptane	IIA	295	T3	Hydrogen	IIC	500	T1
Butyl formate	IIA	320	T2	Carbon disulfide	IIC	95	T6

## 1.4.2 Explosive atmosphere in the form of a cloud of combustible dust (DUST)

We take in consideration protection by enclosures "t" (Ex t). The ignition protection is based on the limitation of the maximum surface temperature of the enclosure and on other surfaces which could be in contact with dust and on the restriction of dust ingress into the enclosure by the use of "dust-tight" or "dust-protected" enclosures.

The choice of these constructions so to avoid primes due to excessive surface temperatures must be carried out in function of the limits of temperature of ignition for the presence of flammable dust both in form of clouds and layers.

In case of presence of flammable dust cloud, the maximum surface temperature will be

$$T_{max(1)} = 2/3 \cdot T_{cl} \quad \text{with } T_{cl} \text{ ignition temperature in } ^\circ\text{C of the dust cloud.}$$

While in case of presence of a flammable dust layer:

$$T_{max(2)} = T_I - 75 \text{ } ^\circ\text{C} \quad \text{with } T_I \text{ ignition temperature in } ^\circ\text{C of a layer of dust 5 mm thick.}$$

**The surface temperature must be smaller or equal to the minimum value between  $T_{max(1)}$  e  $T_{max(2)}$ .**

**Main inflammable substances (DUST) and their own maximum surface temperature**

Substance	Medium largeness particles ( $\mu\text{m}$ )	LEL (g/m3)	Cloud ignition temperature $T_{cl}$ ( $^\circ\text{C}$ )	Layer 5mm thick ignition temperature $T_I$ ( $^\circ\text{C}$ )
<b>Metals, alloys</b>				
Aluminium	10	60	560	430
Bronze	18	750	390	260
Iron	12	500	580	>450
Graphite	7	30	600	680
Lamp-black (carbon black)	13	15	620	435
Sulphur	20	30	280	260

Wood, products of wood, fibres				
Paper		100	620	370
Cellulose (93% sweet wood, 6% hard wood)	14	15	420	335
wood flour	60		470	305
Wood (50% pear tree and 50% kernel)	35	100	500	340
Wood (beech)	61		490	310
Wood (pear tree)	27	100	500	320
Sawdust of wood	65		470	290
Cork	42	30	470	300

Agricultural products				
Cacao	3	125	460-540	245
Coffee	10	25	360	450
Cereals (mixed powders)	37	125	510	300
Wheat flour	56-125	60	480	>450
Soy flour	20	200	620	280
Gelatine	65	60	560	>450
Wheat		100	470	220
Dry milk	165	60	460	330
Milk sugar	22	60-125	450	>450
Rye			415-470	325
Buttermilk	400		450	420
Tobacco		60	485	290
Black tea	76	125	510	300
Sugar	32	30	360	>450
Powdered sugar	17	60	350	>450

## 1.5 Electric motor choice

After speaking about classification of areas with explosion atmosphere, motors groups and categories and classes of temperature, we can enter in the detail of the choice of the type of protection of the motor and the reading of the motor marking.

Explosive atmosphere type			Motor Marking						
Area Classification	Presence of explosive atmosphere	Protection	Group	Category	Type of Protection	Gas Group	Temperature Class	IP degree	
GAS	Zone 1	Probable	High	II	2G	Ex d (Ex de on request)	IIC IIB <sup>(d)</sup>	T4 (T5 e T6 on request)	-
	Zone 2	Improbable	Normal	II	2G	Ex d (Ex de on request)	IIC IIB <sup>(d)</sup>	T4 (T5 e T6 on request)	-
POLVERI	Zone 21	Probable	High	II	2D	Ex t	-	T135°C (T100°C e T85°C on request)	IP6x
	Zone 22	Improbable	Normal	II	2D	Ex t	-	T135°C (T100°C e T85°C on request)	IP6x

		Marking of conformity in compliance with European Directives. Number of Notified body that issued the Product Quality Assurance Notification
		Marking of conformity to the Directive 94/9/CE and other related norms
	II	Group (surface plants different from mines)
	2	Category
	G	Type of explosive atmosphere: Gas, Vapour or Mist
	D	Type of explosive atmosphere: Dust
	Ex	Symbol for machines that satisfy a certain protection mode
	D	Explosion proof housing
	d o e	Explosion proof terminal box / Increased safety terminal box
	tb	Motors with dust protection zone 21 (and zone 22)
	IIC	Gas group ( II C Hydrogen and Acetylene )
	IIC	Dust group
	T4 - T5 - T6	Motor temperature class suitable for flammable substance temperature class in case of protection G (Gas)
	T135°C - T100°C - T85°C	Motor temperature class suitable for flammable substance temperature class in case of protection D (Dust)
	AB xx ATEX yyy	AB : Name of the body that released CE type certificate xx : year of production yyy : certificate number
	IPXX	Protection degree to be marked on the nameplate for D version
	°C amb	Temperature range
	Gb	Gas protection degree
	Db	Dust protection degree

- a) Motors for zones 21 and 22 have protection type Ex t (DUST) matched with protection type Ex d (or Ex de) (GAS).
- b) On request it is possible to have motors Ex de with motor 'd' and increased safety terminal box 'e'.
- c) Motors marked with gas group IIC are suitable to be used where gas groups IIB or IIA are requested.
- d) Single-phase motors with internal capacitors can be marked IIC and IIB and are suitable also for IIA (see page 34) .
- e) Motors with temperature class T4 (gas) are suitable to be used where temperature classes T3, T2, T1 are requested. (On request it is possible to have temperature classes T5 e T6).
- f) IP degree protection is IP55 for GAS and IP66 for DUST.
- g) Ambient temperature range is as follows:  
 -20° +60°C for temperature class T4 and surface temperature T135°C (possible to have -40° +60°C IIB version)  
 -20° +50°C for temperature class T5 and surface temperature T100°C (possible to have -40° +60°C IIB version)  
 -20° +40°C for temperature class T6 and surface temperature T85°C (possible to have -40° +60°C IIB version)

## 2. GENERAL INFORMATION

### 2.1 Range of Motors

Motors RL series are manufactured in compliance with all the European standards concerning equipment and protective systems for potentially explosive atmosphere in compliance with the European Directive ATEX 94/9/CE (better known as ATEX).

As we just told in par. 2.0 to be in compliance with ATEX Directive are necessary:

- EC type Certificate
- Product Quality assurance Notification

Such certificates are issued by notified bodies qualified to release them.

Motors RL series group II category 2G (GAS) with IP% protection are suitable for zone 1 and zone 2, while the motors group II category 2D (DUST) with protection IP66 are suitable also for zone 21 and zone 22.

**(a)** Available also in version T5 (T100°C) and T6 (T85°C) on request

**(b)** Available also in version T5 (T100°C) on request

**(c)** Available in version T6 (T85°C) the ambient temperature range is -20°C +40°C

**(d)** Available also IIC (frame 56-63-71 see page 36 and with D terminal box at page 40)

**(e)** Available also IIB with increased safety "e" terminal box (frame 56-63-71 see page 36 and with D terminal box at page 40 )

## 2.2 Main features

Motors RL comply with the Essential Health and Safety Requirements for potentially explosive atmospheres provided by European Standards: EN 60079-0, EN 60079-1, EN 60079-7, EN 61241-0, EN 61241-1, EN 60529.

- Three-phase and single-phase squirrel cage asynchronous induction motors.
- Aluminium modular motors, flanges and feet can be assembled and disassembled.
- Type of protection Ex d, Ex de, Ex t.
- Overall dimensions comply with IEC 60072 and EN 50347.
- Ventilations **IC 411** (Self ventilated).
- Voltage 230/400 V ± 5% Δ/Y (56 - 112), 400/690 V ± 5% Δ/Y (132 - 160), frequency 50 Hz ± 2%.
- Insulation Class F.
- Protection degree IP55 for zone 1 and zone 2, IP66 for zone 21 and zone 22.
- Maximum noise level 80 dB (A).
- Terminal box (see 3.1):
  - Version Ex d IIC
  - Version Ex e IIC
  - Version without terminal box, motor comprehensive of cable
  - Version Ex d IIB terminal box **A**  
(for single-phase - 1 capacitor)
  - Version Ex d IIB terminal box **B**  
(for high torque single-phase - 2 capacitors, starting system, soft-starter, poles commutation system)
  - Version Ex d IIB terminal box **C**  
(Motor provided with contactor system for starting, soft-starter, contactor system for pole commutation)
- Fan cover in sheet steel.
- Low friction dust seals.

## 2.3 Main Options

### Motors Versions

- Motors 2D protection degree IP66 suitable for zone 21 and zone 22.
- Special Powers on frames 132 and 160
- Motors without ventilation (**IC 410**).
- Motors with forced ventilation (**IC 416**).
- Single phase version Ex d IIB with high starting torque (1 run capacitor – 1 start capacitor).
- Motors with starting system inside the terminal board.

## Electrical and mechanical variants

- Special voltage and frequency.
- Thermal protectors (probe PTC or PTO).
- Anti-condensation heaters.
- Insulation class H.
- Motors tropicalized.
- Motors suitable for frequency inverter drive.
- Double shaft motors.
- Special shaft for ENCODER.
- Special shafts.
- Special flanges.
- Motor without terminal box with cable (length on request).
- Terminal box on the side (right or left).
- Terminal box with special cable glands.
- Increased safety 'e' terminal box.
- Terminal box type A, B, C for special purpose (it is possible to have single-phase motors with frame 112 and box C).
- Protection IP66.
- Temperature class T5 e T6.
- Fan cover + rain cover.
- Special bearings.
- Locked front bearing.
- **Tube version specially designed for ATEX axial fan (see 3.2)**

## Tests

All RAEL motors are 100% tested, both at the beginning (winding test) and at the end of production (motor electric test).

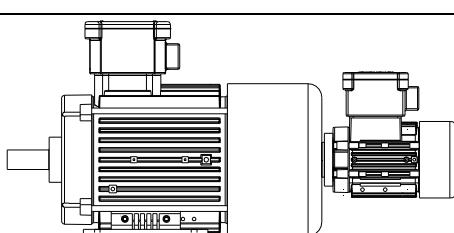

On request additional tests on the motors can be performed:

- Standard test "Routine Test".
- Heating test.

## Forced Ventilation (IC416)

Cooling is provided by an auxiliary Ex motor, fitted in the back of the main motor. In RL series it is a 56 frame single or three phase motor.

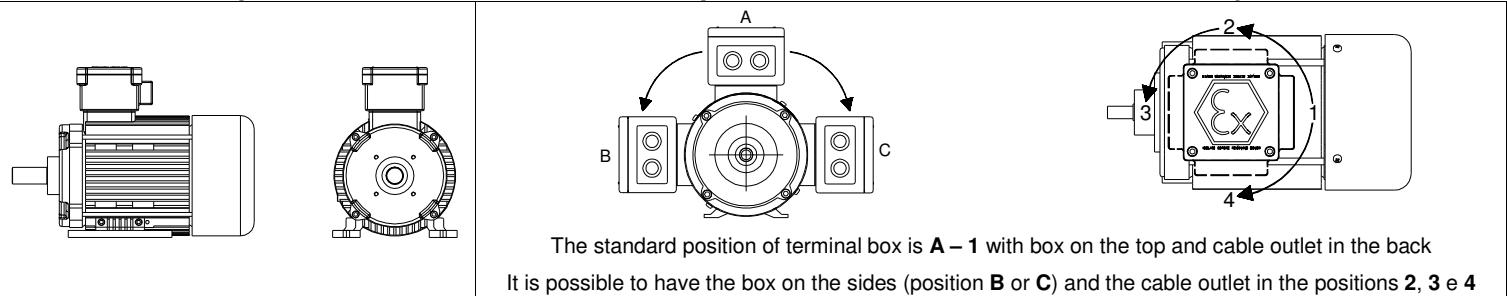

The user shall use an electric device that enables the main motor to run only when the auxiliary motor is already running.

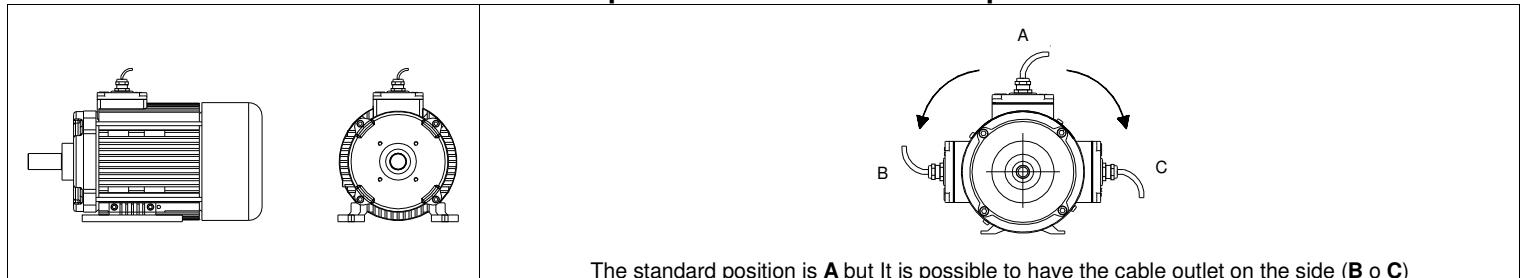

### 3. TERMINAL BOX

#### 3.1 Versions

##### a. Three phase version Ex d IIC and three phase version Ex e IIC increased safety "e"

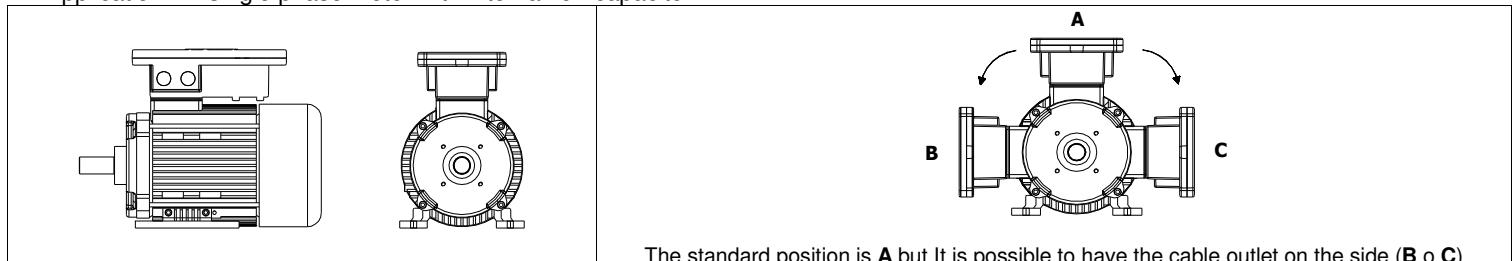

##### b. Motor without terminal box comprehensive of cable. Three phase version Ex d IIC

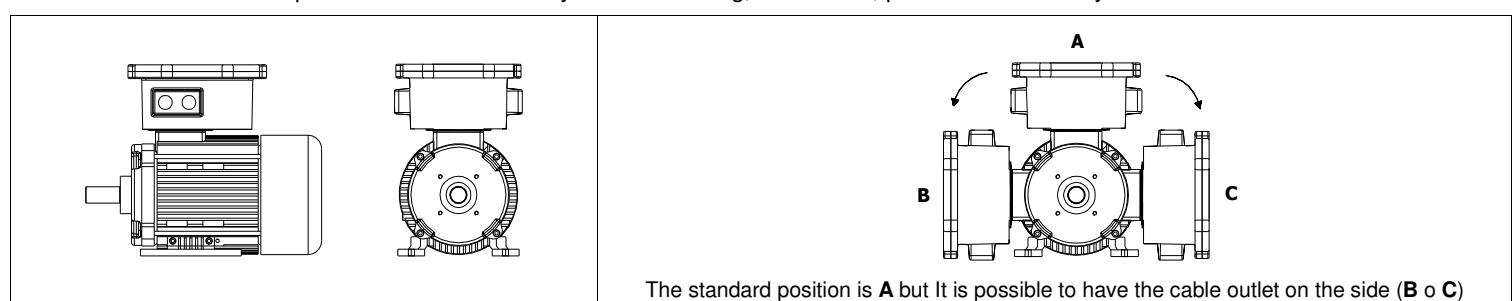

##### c. Motor with terminal box A Version Ex d IIB

Application: single phase motor with internal run capacitor

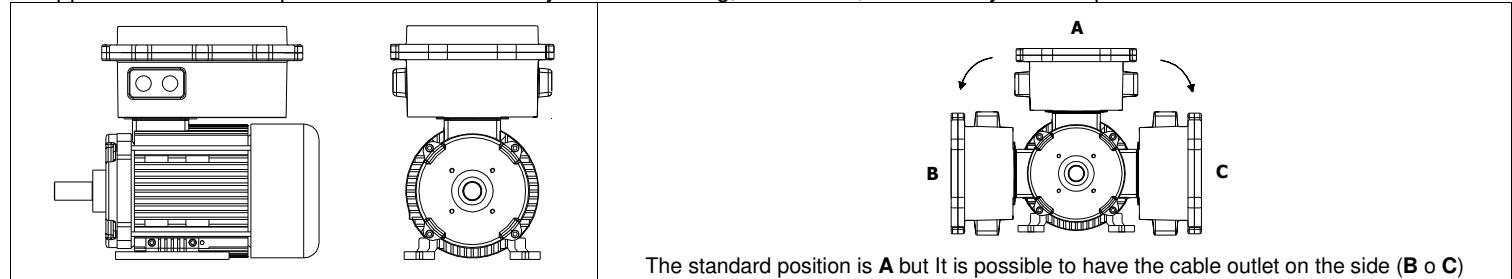

##### d. Motor with terminal box B Version Ex d IIB

Application: - single phase motor with high starting torque with internal run and start capacitor  
- motor provided with contactor system for starting, soft-starter, pole commutation system

##### e. Motor with terminal box C Version Ex d IIB

Application: motor provided with contactor system for starting, soft-starter, contactor system for pole commutation

### 3.2 Tube motors

Tube motors have been specifically designed with axial fan manufacturers in mind.

Being a direct evolution of the RL series , they maintain the same features of the main RL series:

- interchangeable and removable mounting arrangements: B3, B5, B14,B30, B34, B35

- Same protection degrees : Ex d, Ex de, Ex t.

Tube motors differ from standard RL series motors due to their lower profile, allowing ideal airflow in a duct fan configuration.

Terminal box has been repositioned in the back side of the motor providing multiple choice in terms of cable output position, both in-axe and perpendicular.

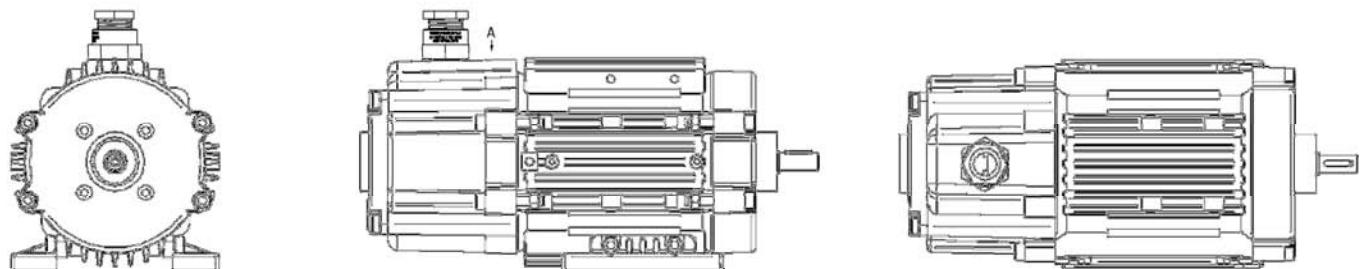

Tube series motors are available in 56,63 and 71 frames with B3,B5, B14 and B34,B35, B30 mounting arrangements.  
Tube series can be personalized on customer's request.

For electrical data please consult three and single phases RL motors data up to frame size 71.

#### Cable Output Positions

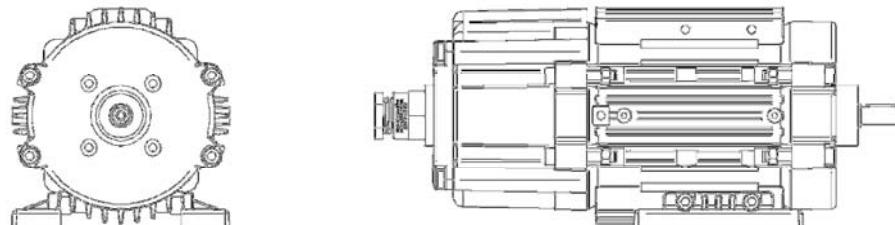

##### a. Top

With or without cable gland/ cable.

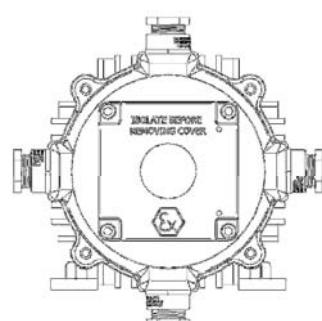

##### b. Back

With or without cable gland/ cable.

Possible cable output position for feet mounted version

### 3.3 Cable entries and terminals

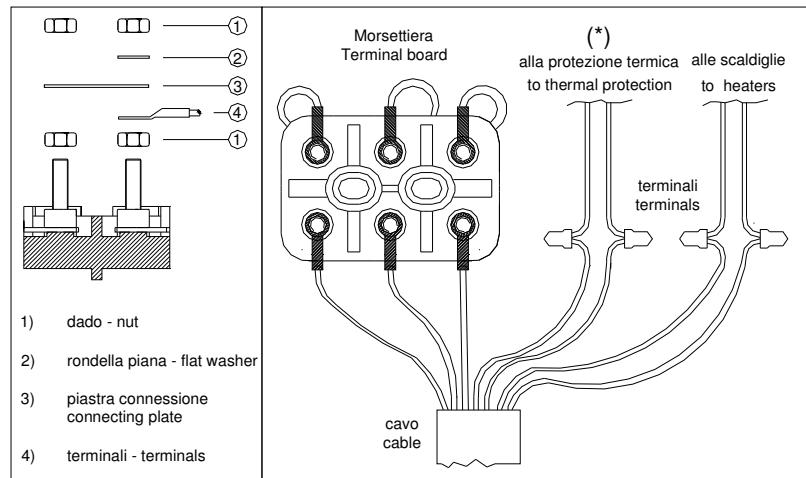

Motor version Ex 'd' must be provided with cable entries that comply with EN 60079-1.  
 Motor version Ex 'de' must be provided with cable entries that comply with EN 60079-7.  
 Motor version Ex t must be provided with cable entries that comply with EN 61241-1.

		Cable entries			Terminals
		Frame	Standard	On request	
Three phase version	Mains	56 - 90	1 x M20	1 x NPT 1/2"	M4
		100 - 112	1 x M25	1 x NPT 3/4"	M5
		132-160	2 x M32	2 x NPT 1"	M6
	Auxiliaries	56-160	1 x M20	1 x NPT 1/2"	See (1) and (2)
Version with increased terminal box A, B, C	-	Up to 56 - 112	n.4 cable entries M20 o M25	Up to n.4 cable entries NPT 3/4" o NPT 1"	

When the motor is provided with a thermal protection and/or heaters these must have a separate cable entry and the connection shall be done as shown below (depending on the type of terminal box):

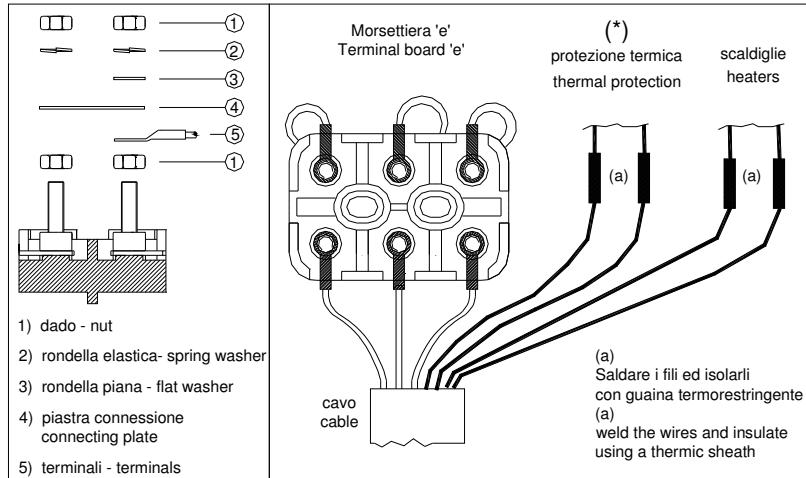

(1) Terminal box version Ex 'd'

(Terminal board 6 pins)

(2) Terminal box version Ex 'e'

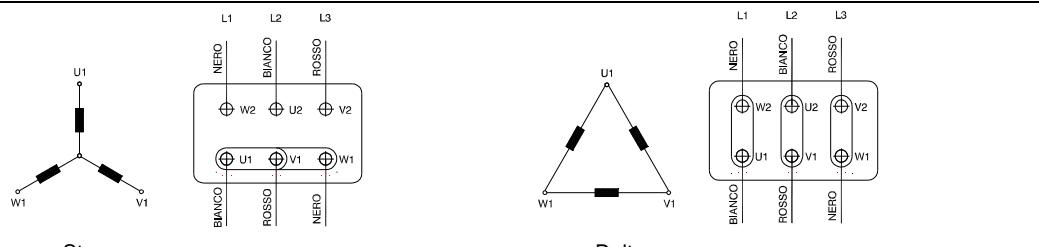

(Terminal board 6 pins increased safety 'e')

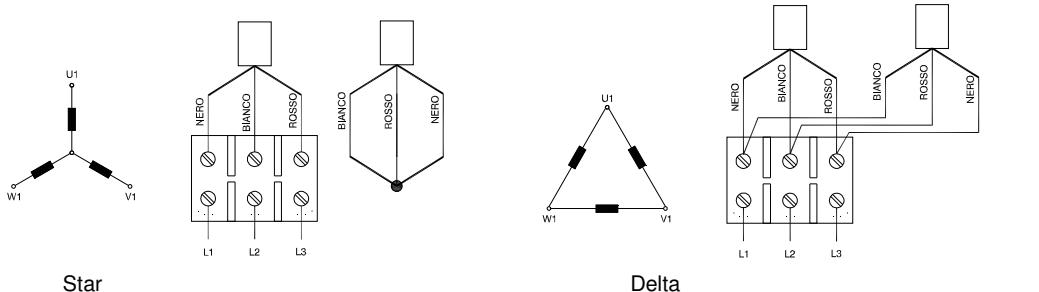

### 3.4 Connecting diagrams

Three phase 1 speed – Star and delta connection

**Standard**

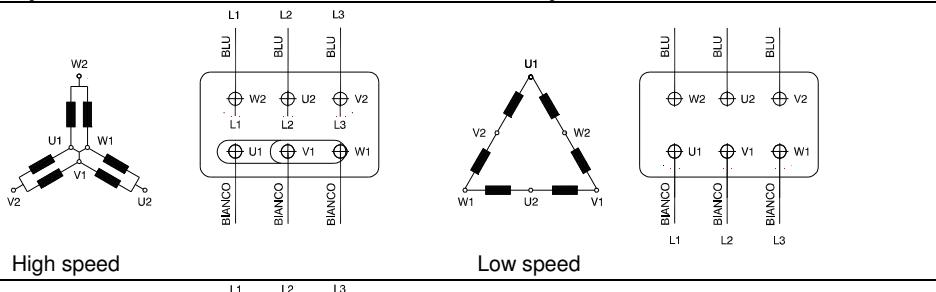

**Without Terminal box**

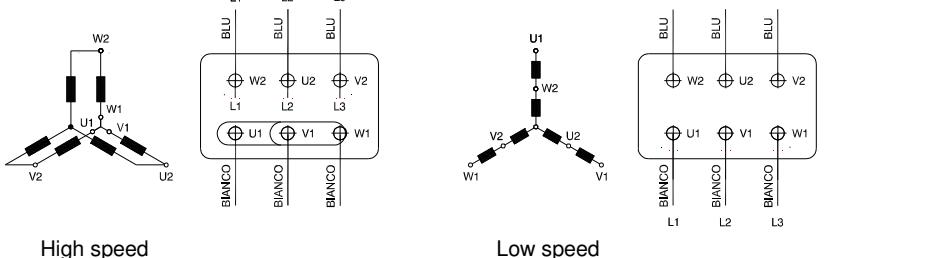

Three phase 2 speeds – Dahlander Connection - 2/4 - 4/8 poles

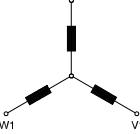

**Constant Torque**

**Quadratic Torque**

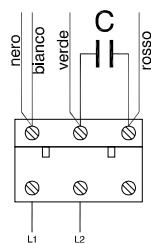

Three phase 2 speeds – 2 separate windings - 4/6 - 6/8 poles

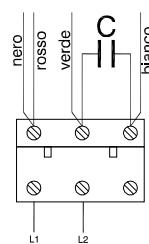

**Single phase**

Clockwise rotation

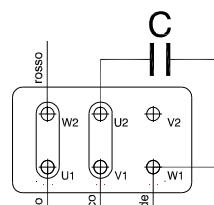

Conuterclockwise rotation

IIB Version (page 34)

Clockwise rotation

Conuterclockwise rotation

## 4. MECHANICAL CHARACTERISTIC

### 4.1 Mounting arrangements

RL motors can be made in the mounting arrangements as shown in the table.

Such motors are designed and manufactured with modular feet and flanges, so to ease the change of mounting arrangement and to optimize the warehouse management.

The basic mounting arrangements are shown in the standard EN 60034-7. Motors with mounting arrangements IM B3, IM B5, IM B14 can also be used in different mounting positions.

**IM B3** IM B6, IM B7, IM B8, IM V5 o IM V6.

**IM B35** IM V15 o IM V36, IM 2051, IM 2061, IM 2071.

**IM B34** IM 2111 O IM 2131, IM 2151, IM 2161, IM 2171.

**IM B5** IM V1 o IM V3. (flange with passing holes).

**IM B14** IM V18 o IM V19. (flange with theraded holes).

Basic mountings			Other mountings		
IM B3 IM 1001	IM V5 IM 1011	IM V6 IM 1031	IM B6 IM 1051	IM B7 IM 1061	IM B8 IM 1071
IM B35 IM 2001	IM V15 IM 2011	IM V36 IM 2031	IM 2051	IM 2061	IM 2071
IM B34 IM 2101	IM 2111	IM 2131	IM 2151	IM 2161	IM 2171
IM B5 IM 3001	IM V1 IM 3011	IM V3 IM 3031			
IM B14 IM 3601	IM V18 IM 3611	IM V19 IM 3631			

## 4.2 Materials

### Materials of the main components.

Type of material								
Shield frames flanges terminal box	Shaft	Rotor	Fan	Fan cover	Tie rods	Screw	Cable glands	Motor Plate
Aluminium	Steel 35S20	Die-cast Aluminium (squirrel cage)	Thermoplastic material or Aluminium	Zinc-plated steel	Steel 4.8	Steel 8.8	nickel-plated brass	Anodized aluminium or on request stainless steel

### Bearings

The 2Z series bearings are lubricated for life and required not further lubrication. Nevertheless, we recommend in case of continuous running, long time stop, low temperature, radial and/or axial load, frequency inverter used, to control some time to time the ball bearings (40 000 hours for 4,6,8 pole motors and 20 000 hours for the 2 pole motors).

Motor		Bearing		Lubrication
Frame	Poles	Drive-end shield	Rear shield	
56	2 - 4 - 6 - 8	6201 2Z	6201 2Z	It doesn't need lubrication
63	2 - 4 - 6 - 8	6202 2Z	6202 2Z	It doesn't need lubrication
71	2 - 4 - 6 - 8	6202 2Z	6202 2Z	It doesn't need lubrication
80	2 - 4 - 6 - 8	6204 2Z	6204 2Z	It doesn't need lubrication
90	2 - 4 - 6 - 8	6205 2Z	6205 2Z	It doesn't need lubrication
100	2 - 4 - 6 - 8	6206 2Z	6206 2Z	It doesn't need lubrication
112	2 - 4 - 6 - 8	6306 2Z	6306 2Z	It doesn't need lubrication
132	2 - 4 - 6 - 8	6308 2Z	6308 2Z	It doesn't need lubrication
160	2 - 4 - 6 - 8	6309 2Z	6309 2Z	It doesn't need lubrication

### Rotary shaft seals

Motors RL series can be equipped with seals so to guarantee an IP66 degree protection. In such a way the motor is protected from the income of dust and polluting agents.

IP65 or IP66 protection degree is furthermore necessary to warranty the protection type Ex t.

Motor		Rotary shaft seal (DIN 3760)	
Frame	Poles	Front	Rear
56	2 - 4 - 6 - 8	12x22x7A	12x22x7A
63	2 - 4 - 6 - 8	15x24x5A	15x24x5A
71	2 - 4 - 6 - 8	15x24x5A	15x24x5A
80	2 - 4 - 6 - 8	20x30x5A	20x30x5A
90	2 - 4 - 6 - 8	25x37x5A	25x37x5A
100	2 - 4 - 6 - 8	30x50x7A	30x50x7A
112	2 - 4 - 6 - 8	30x50x7A	30x50x7A
132	2 - 4 - 6 - 8	40x72x7A	40x72x7A
160	2 - 4 - 6 - 8	45x72x8A	45x72x8A

## 5. ELECTRICAL DATA

### 5.1 Three phase motors - 1 speed

The features of three phase motors for general purpose are as follow:

- Three phase asynchronous motor, squirrel cage rotor, self ventilated (IC411).
- Duty S1, Insulation class "F", IP55, 400V - 50 Hz.

• Connections

Type	$\Delta$	$\text{Y}$
56 – 112	230 V	400V
132 – 160	400 V	690 V
56-160 for INVERTER	230 V	400 V

- For temperature class T5 and T6 and ambient temperature see par 2.1

#### 5.1.1 Motors for INVERTER duty

In case the motors are driven by **INVERTER** we have to point out some things:

- Motor must be equipped with PTC thermistor.
- Motor driven by inverter means not to have a perfect voltage and current sine wave with increase of losses and heating of the motor.
- Speed variation affects also the ventilation (in case of IC411).
- The stress on the bearings increases and they shall be checked more frequently; for this reason the operating period with a speed above 3600 rpm shall never exceed 10% of the complete working cycle.
- The **best connection** for motors driven by inverter is the **star connection 400V**.
- In case of **constant torque application and with frequency values above 60Hz** it is necessary to use a **delta connection**.

For all these reasons RAEL manufactures special motors for inverter duty so to minimize all the inconveniences described above.

These motors are electrically oversized so to minimize the electrical losses and also reduce the heating and are provided with thermistor PTC120°C for temperature class T4; for this reason the winding of the motor is made on an oversized stator and is fitted with phase-insulators (on request it is possible to have the version T5 with PTC90°C and T6 with PTC70°C).

In case of overheating it is possible to use the forced ventilation option (see page 15).

All the bearings mounted on RAEL motors have the best quality for motors (V2 type).

In this paragraph we will show the rating of the 1 speed 3-phase motors and the rating of the motors for inverter duty.

The data tables of the motors for inverter duty give an idea of power and current values and are reliable only in the case that the inverter used to drive the motor is an high quality and an high performance one.

Range of frequency 5÷87 Hz

## 5.2 Three-phase Motors 2 speed – Constant Torque (for general purpose)

- Three phase asynchronous motor, squirrel cage rotor, self ventilated (IC411).
- Duty S1, Insulation class "F", IP55, 400V- 50 Hz.

• Connections	Poles	Connections	High Speed	Low Speed
	2/4 – 4/8	(Dahlander)	YY 400 V	Δ 400V
	4/6 – 6/8	(2 Separate windings)	Y 400 V	Y 400V

- For ambient temperature see par 2.1

## 5.4 Single-phase motors

- Single-phase asynchronous motor, squirrel cage rotor, self-ventilated (IC411).
- Duty S1, Insulation class "F", IP55, 230V - 50 Hz.
- For ambient temperature see par 2.1
- The motors considered in the rating table are single-phase motors with 1 capacitor. In case of single-phase motors with high starting torque it is possible to have a start capacitor complete with electronic switch (on request mechanical).

Rated data at 230V/50Hz

## 7. SPARE PARTS

### 7.1 Personnel qualification

Overhauls and repairs must be only realised by qualified people in accordance with the standards EN 60079-17 or national standards (last edition). Qualified people must have knowledge about explosion protection.

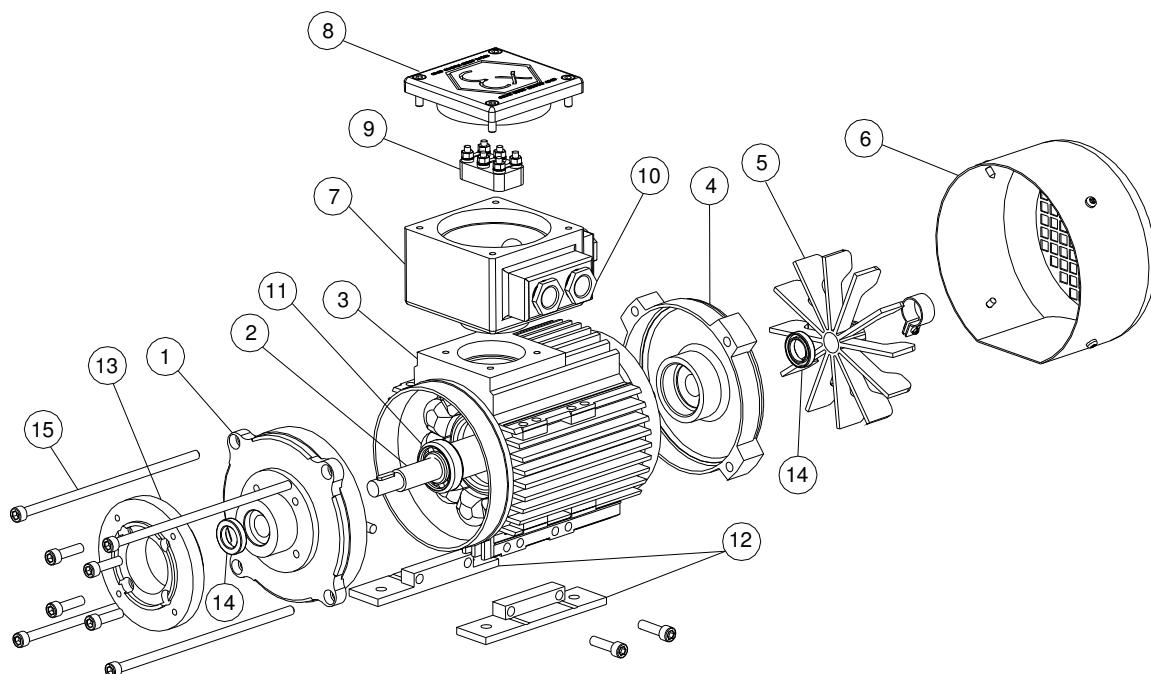

Repairs must be made regarding the rules as define in EN 60079-19 standards.

These repairs can only be done under the control or agreement with Motori Elettrici by a repair shop designed by Rael or a recognized laboratory.

In case these rules are not respected, liability is released.

### 7.2 List of spare parts

All motors components must be replaced by original spare parts. In these cases please contact Rael directly and give the serial number of the motor so to ask the authorization to repair the motor too.

SODECA

Our company is certified  
ISO 9001: 2008 and it has obtained the  
Product Quality Assurance Notification according to  
Directive ATEX 94/9/CE.  
Our motors, having been built in compliance with the  
previously mentioned European Standard concerning  
equipment and protective systems for potentially  
explosive atmosphere and having been tested in TUV  
laboratories, come with EC type certificate.
